6 An ordinary fair dice is thrown once.

(a) On the probability scale below, mark with a cross (×) the probability that the dice lands on an odd number.

Odd faces: 1, 3, 5 → 3 out of 6 = ½.

1 mark
Cross at ½

(1)

(b) Write down the probability that the dice lands on a number greater than 4

Greater than 4: the two faces 5 and 6.

$\frac{1}{3}$

1 mark
2 out of 6 = 1 out of 3

(1)

(Total for Question 6 is 2 marks)
