18 The pie charts show information about the favourite animal of each student at school **A** and of each student at school **B**.

School **A**

School **B**

There are 480 students at school **A**.

There are 760 students at school **B**.

Henry says,

"The same number of students at each school have tigers as their favourite animal."

Is Henry correct?
You must show how you get your answer.

School A: $2x + 60 = 360$, so $x = 150°$

Tigers A: $150/360 \times 480 = 200$

School B: tigers $= 360 - 160 - 110 = 90°$

Tigers B: $90/360 \times 760 = 190$

No. School A has 10 more tiger votes.

4 marks total
Find A tiger angle
200 at school A
190 at school B
No: difference 10

(Total for Question 18 is 4 marks)
