15 Expand and simplify $(3x + 2)(2x + 1)(x - 5)$

First $(3x + 2)(2x + 1) = 6x^2 + 7x + 2$.

Now multiply by $(x - 5)$:

$6x^3 + 7x^2 + 2x - 30x^2 - 35x - 10$

$= 6x^3 - 23x^2 - 33x - 10$.

3 marks total
Expand first two brackets
Multiply by x − 5
