14 Here is a rectangle.

Coby has to find the perimeter of this rectangle.

He writes,

Perimeter = 7 × 3

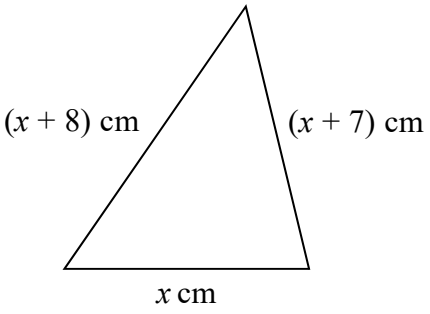

(a) What mistake has Coby made?

7 × 3 gives area; perimeter adds all four sides.

1 mark
Area is not perimeter

(1)

Here is a triangle.

Iram solves a problem about this triangle to find the value of x.

Her answer is

$x = -2$

(b) Explain why Iram's answer must be wrong.

1 mark
Length cannot be negative

x is a side length and cannot be -2 cm.

(1)

(Total for Question 14 is 2 marks)
