19 (a) Expand $x(x - 4)$

$x(x - 4) = x^2 - 4x$.

1 mark
Expand both terms

.....

(1)

(b) Factorise $15y - 10$

$15y - 10 = 5(3y - 2)$.

1 mark
Take out factor 5

.....

(1)

(c) Solve $7(f - 5) = 28$

$7(f - 5) = 28$, so $f - 5 = 4$.

Add 5: $f = 9$.

2 marks total
Divide both sides by 7
f = 9

$f =$ .....

(2)

(Total for Question 19 is 4 marks)
