30 (a) Make q the subject of $p = 6q + 7$

$p = 6q + 7$. Subtract 7 from both sides: $p - 7 = 6q$.

Divide both sides by 6: $q = (p - 7)/6$.

2 marks total
Subtract 7
Divide by 6

(2)

(b) Simplify $(m^{-2})^{-3}$

$(m^{-2})^{-3} = m^{((-2)\times(-3))} = m^{6}$.

1 mark
Multiply exponents: 6
