13 Liquid **A** and liquid **B** are mixed to make liquid **C**.

Liquid **A** has a density of 70 kg/m^3
Liquid **A** has a mass of 1400 kg

Liquid **B** has a density of 280 kg/m^3
Liquid **B** has a volume of 30 m^3

Work out the density of liquid **C**.

Volume A = 1400 ÷ 70 = 20 m^3.

Mass B = 280 × 30 = 8400 kg.

Density C = (1400 + 8400)/(20 + 30)

= 9800/50 = 196 kg/m^3.

3 marks total
Volume A / mass B
Total mass ÷ total volume
196 kg/m^3

..... kg/m^3

(Total for Question 13 is 3 marks)
