9 Aisha recorded the heights, in centimetres, of some girls.
She used her results to work out the information in this table.

Least height	142 cm
Lower quartile	154 cm
Interquartile range	17 cm
Median	162 cm
Range	40 cm

Aisha drew this box plot for the information in the table.
The box plot is **not** fully correct.

Write down the two things Aisha should do to make the box plot fully correct.

1 Move the median line from 161 cm to 162 cm.

2 Upper quartile = 154 + 17 = 171 cm, not 172 cm.

2 marks total
Median should be 162
UQ should be 171

(Total for Question 9 is 2 marks)
