8 There are some counters in a bag.
The counters are blue or green or red or yellow.

The table shows the probabilities that a counter taken at random from the bag will be blue or will be green.

Colour	blue	green	red	yellow
Probability	0.32	0.20		

The probability that a counter taken at random from the bag will be red is five times the probability that the counter will be yellow.

There are 300 counters in the bag.

Work out the number of yellow counters in the bag.

P(red or yellow) = 1 – 0.32 – 0.20 = 0.48.

Let P(yellow)=y; then P(red)=5y.

6y = 0.48, so y = 0.08.

Yellow counters = 0.08 × 300 = 24.

3 marks total
Remaining probability .48
Six equal parts: .08
24 counters

.....

(Total for Question 8 is 3 marks)
