20		Proof	B1	for using any correct trig value for 30°, e.g. sin 30 = 0.5, cos 30 = $\frac{\sqrt{3}}{2}$ or tan 30 = $\frac{1}{\sqrt{3}}$
			M1	for hypotenuse of small triangle = $2y$ or hypotenuse of large triangle = $2n$
			A1	for method to find the hypotenuse of middle triangle, e.g. $\sqrt{(2n)^2 - n^2}$ $(=\sqrt{3}n)$
			A1	for a correct equation linking y and n and correct working leading to the given result
