Question	Answer	Mark	Mark scheme	Additional guidance
15	Shown	M1	makes a start by finding multiplier, eg $\frac{5+7}{1+2}$ Oe or $\frac{1+2}{5+7}$ oe or 5 + 7 = 12, 1 + 2 = 3 and 4 × 3 = 12 **or** $AB:BD = 4 : 8$ or $y = 4x$ (appropriate x and y shown) or $\frac{1}{3} = \frac{4}{12}$ **or** starts process using algebra to form an equation, eg $AB = x$, $BC = y$, $BD = 2x$, $CD = 2x - y$, $\left(\frac{AC}{CD} =\right) \frac{x+y}{2x-y} = \frac{5}{7}$	
		M1	for process to find connection between lengths of BD and BC, eg BD: $BC = 7 + 1 : 5 - 4$ oe **or** $BD = \frac{8}{12}\ AD$ and $BC = \frac{1}{12}\ AD$ oe **or** finds relationship between variables, eg $3x = 12y$	
		A1	completes to show given result
