| Question | Answer | Mark | Mark scheme | Additional guidance |
|---|---|---|---|---|
| 17 | Shown | M1 | starts process by using Pythagoras' rule on at least one triangle,<br>eg $(a-1)^2 + (b-1)^2 = (c-1)^2$ oe or $a^2 + b^2 = c^2$ oe | Pythagoras' rule may appear in any form |
| | | M1 | continues process by using Pythagoras' rule on both triangles and completes expansion,<br>eg $a^2 - 2a + 1 + b^2 - 2b + 1 = c^2 - 2c + 1$ oe and<br>$a^2 + b^2 = c^2$ oe | |
| | | C1 | completes process to given result, $2a + 2b - 2c = 1$ | |
