15 Here are a triangle and a rectangle.

The area of the rectangle is 6 times the area of the triangle.

Work out the width of the rectangle.

Triangle area = $\frac{1}{2}$ × 8 × 9 = 36 cm²

1 mark
Find the triangle area

Rectangle area = 6 × 36 = 216 cm²

1 mark
Multiply the area by 6

Width = 216 ÷ 16

16 × 13 = 208; 8 cm² remains.

8 ÷ 16 = 0.5, so width = 13.5 cm

1 mark
Divide area by length

1 mark
Correct width

13.5 ..... cm

(Total for Question 15 is 4 marks)

16 $v = u + at$

$u = 1 \quad a = -3 \quad t = \frac{1}{2}$

Work out the value of v.

$v =$ .....

(Total for Question 16 is 2 marks)
