(Total for Question 9 is 5 marks)

10 Naoby invests £6000 for 5 years.
The investment gets compound interest of x% per annum.

At the end of 5 years the investment is worth £8029.35

Work out the value of x.

Let m be the yearly multiplier.

$m^5 = 8029.35 \div 6000 = 1.338225$

1 mark
Find the 5-year multiplier

$m = \sqrt[5]{1.338225} = 1.059999908...$

1 mark
Take the fifth root to find the annual multiplier

$x = (m - 1) \times 100 = 5.9999908... \approx 6\%$

1 mark
Annual compound interest rate is 6%

6
