16			1.08 and explanation	5	B1 finds a bound of a: 6.425 or 6.435 or 6.434999... or a bound of b: 5.5135 or 5.5145 or 5.5144999.. P1 uses UB and LB in equation P1 process of choosing correct bounds, e.g. $\sqrt{\frac{6.435}{5.5135}}$ or $\sqrt{\frac{6.425}{5.5145}}$ A1 for 1.079... and 1.080... both values must clearly come from correct working C1 for 1.08 from 1.079... and 1.080... and "both LB and UB round to 1.08"
