Question	Answer	Mark	Mark scheme	Additional guidance
22	Proof	C1	for one correct pair of equal angles with correct reason from: angle ACB = angle ADB, (<u>angles</u> in the <u>same segment</u> are equal) angle DBC = angle DAC, (<u>angles</u> in the <u>same segment</u> are equal) angle ABD = angle ACD, (<u>angles</u> in the <u>same segment</u> are equal) or for recognising all angles of 60 in triangle AED and in triangle CEB)	Underlined words need to be shown; reasons need to be linked to their statement(s) Pairs of equal angles may be just shown on the diagram
		C1	for one identity, with reason(s), from the following list of alternatives: Alternatives: a complete method to show that angle ACB = angle DBC (= 60), or BC being common to both triangles or $DB = DE + EB = AE + EC = AC$ (sides of an <u>equilateral triangle</u> are equal) or angle $ABC = 60 + \text{angle } ABD = 60 + \text{angle } ACD = \text{angle } DCB$ (<u>angles</u> in the <u>same segment</u> are equal) or angle BDC = angle CAB (<u>angles</u> in the <u>same segment</u> are equal)	
		C1	for a second identity, with reason(s), from the alternatives above	
		C1	for concluding the proof with a third identity, with reason(s), from the alternatives above, together with the condition for congruency, ASA or SAS or AAS
