13 A scout group has a raffle to raise money for charity.
There is 1 prize to be won in the raffle.

Laura buys 12 raffle tickets.
A total of 350 raffle tickets are sold.

Find the probability that Laura does **not** win the prize.

Tickets not bought by Laura = 350 – 12 = 338

1 mark
Subtract Laura's tickets from the total

$$P(\text{Laura loses}) = \frac{338}{350} = \frac{169}{175}$$

1 mark
Other people's tickets divided by all tickets

$\frac{169}{175}$

(Total for Question 13 is 2 marks)
