14 There are 16 hockey teams in a league.
Each team played two matches against each of the other teams.

Work out the total number of matches played.

Each of 16 teams plays 15 others, twice: 16 × 15 × 2 = 480.

1 mark
Start by counting the matches played by all teams

This counts each match twice, once for each team playing it.

Total matches = 480 ÷ 2 = 240.

1 mark
Remove the double counting

240

(Total for Question 14 is 2 marks)
