12 There are only 7 blue pens, 4 green pens and 6 red pens in a box.

One pen is taken at random from the box.

Write down the probability that this pen is blue.

Total pens = 7 + 4 + 6 = 17

$P(\text{blue}) = \frac{7}{17}$

1 mark
Correct probability setup

1 mark
7 blue out of 17

$\frac{7}{17}$

(Total for Question 12 is 2 marks)
