15 Here are a triangle and a rectangle.

The area of the rectangle is 6 times the area of the triangle.

Work out the width of the rectangle.

Triangle area = $\frac{1}{2} \times 8 \times 9 = 36\ cm^2$

1 mark
Find the triangle area

Rectangle area = $6 \times 36 = 216\ cm^2$

1 mark
Multiply the area by 6

Width = $216 \div 16$

$16 \times 13 = 208$; $8\ cm^2$ remains.

$8 \div 16 = 0.5$, so width = 13.5 cm

1 mark
Correct width

13.5 cm

(Total for Question 15 is 4 marks)
