**22** The line **L** is shown on the grid.

Find an equation for **L**.

Two points on L are (0, –6) and (2, 0).

Gradient = $\frac{0 - (-6)}{2 - 0} = \frac{6}{2} = 3$

**1 mark**
Find the gradient or intercept

$y = mx + c$, so $y = 3x + c$.

**1 mark**
Use the straight-line form

The y-intercept is –6, so $c = -6$.

$y = 3x - 6$

**1 mark**
Complete correct equation

$y = 3x - 6$

**(Total for Question 22 is 3 marks)**
