17 Stuart throws a biased coin 10 times.
He gets 7 Tails.

Maxine throws the same coin 50 times.
She gets 30 Tails.

Prasha is going to throw the coin once.

(i) Whose results will give the better estimate for the probability that she will get Tails, Stuart's or Maxine's?
You must give a reason for your answer.

Maxine, because she throws the coin more

times than Stuart (50 trials compared with 10).

1 mark
Name Maxine and compare the number of trials.

(1)

(ii) Use Stuart's and Maxine's results to work out an estimate for the probability that Prasha will get Tails.

Total tails = 7 + 30 = 37

Total throws = 10 + 50 = 60

Combined estimate = $\frac{37}{60}$

1 mark
37 out of 60 throws.

$\frac{37}{60}$

(1)

(Total for Question 17 is 2 marks)
