**4** A container is in the shape of a cuboid.

The container is $\frac{2}{3}$ full of water.

A cup holds 275 m*l* of water.

What is the greatest number of cups that can be completely filled with water from the container?

Full volume = 30 × 6 × 19 = 3420 $cm^3$

**1 mark**
Find cuboid volume.

Water = 2/3 × 3420 = 2280 $cm^3$

**1 mark**
Take two thirds.

1 $cm^3$ = 1 ml, so water = 2280 ml.

2280 ÷ 275 = 8 remainder 80

**1 mark**
Divide by 275 ml.

8 cups use 2200 ml; 9 need 2475 ml.

**1 mark**
Greatest whole number: 8.

8

**(Total for Question 4 is 4 marks)**
