12 60 people each took a driving test one day.

21 of these people were women.
18 of the 60 people failed their test.
27 of the men passed their test.

(a) Use this information to complete the frequency tree.

1 mark
39 men / 12 fail

1 mark
21 women / 27 men pass

60 - 21 = 39 men
39 - 27 = 12 men failed.

1 mark
All tree values correct

(3)

One of the men is chosen at random.

(b) Work out the probability that this man failed his test.

Men who failed $\frac{12}{39} = \frac{4}{13}$

2 marks total
12 out of 39 men
Probability 4/13

(2)

(Total for Question 12 is 5 marks)
