12 In a sale, the price of a jacket is reduced.

The jacket has a normal price of £52
The jacket has a sale price of £41.60

Work out the percentage reduction in the price of the jacket.

Reduction = £52 – £41.60 = £10.40.

1 mark
Find price decrease

£	% of original
52	100
10.40	20

1 mark
Decrease ÷ original × 100

10.40 ÷ 52 × 100 = 20%.
