2

Phone calls cost £y for x minutes.

The graph gives the values of y for values of x from 0 to 5

(a) (i) Give an interpretation of the intercept of the graph on the y-axis.

The fixed charge is £0.50, even for zero minutes.

1 mark
Fixed charge

(ii) Give an interpretation of the gradient of the graph.

The call costs an extra £1.50 for each minute.

1 mark
Cost per minute

(2)

(b) Find the equation of the straight line in the form $y = mx + c$

Gradient = rise ÷ run = 3 ÷ 2 = 1.5.

1 mark
Read two points and find gradient

y-intercept = 0.5, so m = 1.5 and c = 0.5.

1 mark
Use m = 1.5

y = 1.5x + 0.5

1 mark
Correct equation

(3)

(Total for Question 2 is 5 marks)
