11 Daisy thinks of a whole number.
She multiplies the number by 3
Daisy's answer is 34

(a) Explain how you know Daisy's answer is wrong.

34 is not a multiple of 3: its digit sum is 3 + 4 = 7.

1 mark (1)
Whole number ×3
must be a multiple of 3

Here is a number machine.

Abbie says that when the output is 36 the input is 60

Here is her working.

$$36 - 6 = 30$$
$$30 \times 2 = 60$$

Abbie is wrong.

(b) Explain what she has done wrong.

Work backwards: reverse the order and invert each operation.

First divide by 2, then subtract 6: 36 ÷ 2 − 6 = 12.

1 mark
Reverse the order

1 mark (2)
Use ÷2, not ×2

(Total for Question 11 is 3 marks)
