9 There are 19.5 litres of water in a water container.
A cup holds 210 m*l* of water.

How many cups can be completely filled using the water in the water container?

19.5 litres = 19 500 ml.

1 mark
Convert to millilitres

Cups	Volume (ml)
1	210
92	19320
93	19530

19 500 ÷ 210 = 92.857...

Only 92 cups can be full.

1 mark
Divide by one cup's volume

1 mark
92 complete cups

(Total for Question 9 is 3 marks)
