11 Tom grows tomatoes.

The box plot below shows the distribution of the weights of 15 of Tom's tomatoes.

(a) Work out the interquartile range.

IQR = 166 – 158 = 8 g.

1 mark
8 g

..... g

(1)

Jack also grows tomatoes.

Here are the weights, in grams, of 15 of Jack's tomatoes.

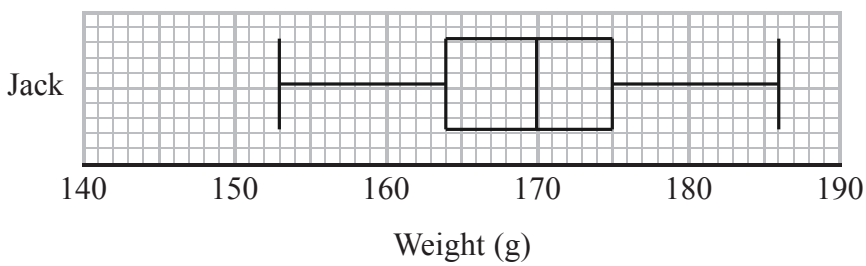

153 155 158 164 166 167 170 170 173 174 175 175 177 179 186

(b) On the grid below, draw a box plot for this information.

Min 153; LQ 164; median 170; UQ 175; max 186.

1 mark
Two values;
box or whiskers

1 mark
Box and whiskers

1 mark
All five plotted correctly

(3)

(c) Compare the distribution of the weights of Tom's tomatoes with the distribution of the weights of Jack's tomatoes.

Jack's median is 170 g; Tom's is 162 g.

Jack's tomatoes are generally heavier.

1 mark
Compare medians
in context

Tom's IQR 8 g < Jack's 11 g: Tom's weights vary less.

1 mark
Compare spread

(2)

(Total for Question 11 is 6 marks)
