11 Robin is describing a shape to her friend Lilly.

Robin says,

> "The shape has four sides.
> It only has one pair of parallel sides."

(a) What shape is Robin describing?

Trapezium.

1 mark
One parallel pair

(1)

Lilly then describes a shape.

Lilly says,

> "The shape has four sides.
> It has two pairs of equal opposite sides.
> The opposite sides are parallel."

Robin says there are two possible shapes.

(b) Is she correct?
Explain your answer.

No. A parallelogram, rectangle, rhombus or square can have equal opposite sides and parallel opposite sides.

1 mark
4 named shapes

(1)

(Total for Question 11 is 2 marks)
