24 Solve the simultaneous equations

$$3x - 2y = -5$$
$$2x - 4y = 2$$

First equation ×2: $6x - 4y = -10$.

1 mark
Eliminate y

Second equation: $2x - 4y = 2$.

Subtract: $4x = -12$, so $x = -3$.

1 mark
Substitute x

$$3(-3) - 2y = -5$$
$$(+9) \qquad (+9)$$
$$-2y = 4$$
$$(\div(-2)) \qquad (\div(-2))$$

$y = -2$.

$x = -3$, $y = -2$.

1 mark
Both values correct

$x =$ .....

$y =$ .....

(Total for Question 24 is 3 marks)
