3 Here is an accurate scale drawing of a school playground.

1 mark
2cm from AB

1 mark
Bisect angle B

1 mark
4.5cm radius
centred on C

1 mark
Hatched overlap

1 cm represents 2 m

Nasim is going to put a seat in the playground.

The seat has to be

less than 9 m from C
closer to BC than to AB
more than 4 m from AB

Show, by shading on the diagram, the region where Nasim can put the seat.

(Total for Question 3 is 4 marks)

9m →4.5cm;4m →2cm at the original scale.

Nearer BC than AB: below the45° angle bisector.

Hatched region satisfies all three conditions.

Dashed boundaries are excluded by less/more than.
