**13** Here is a scale diagram of part of a wall.

Scale: 4 cm represents 1 m

Kamran is going to cover this part of the wall with square tiles.
Each tile has sides of length 10 cm.

The tiles cost 25p each.
Kamran spends £60 on tiles.

Show that Kamran has bought enough tiles.

Wall:2m by1m = 200cm by100cm.

**1 mark**
Use measured scale

Tiles across:200÷10=20; tiles high:100÷10=10.

Tiles needed = 20×10 = 200.

**1 mark**
Number of tiles

Cost = 200×25p = 5000p = £50.

**1 mark**
Cost or tiles bought

£60 buys60÷0.25=240 tiles.

240>200 (and £60>£50), so enough tiles.

**1 mark**
