29 The diagram shows a block of silver in the shape of a cuboid.

The density of silver is 10.5 g/cm^3

Work out the mass, in grams, of the block of silver.

Volume = 10×10×20 = 2000cm^3.

1 mark
Find volume

Mass = density × volume.

=10.5×2000 = (10+0.5)×2000.

1 mark
Multiply by density

=20000+1000 = 21000g.

1 mark
21000g

..... grams

(Total for Question 29 is 3 marks)
