24 Simon can see two lights, light **A** and light **B**.

Light **A** flashes every 15 seconds.
Light **B** flashes every 18 seconds.

At 10 pm, both lights flash at the same time.

How many **more** times will both lights flash at the same time in the next 4 minutes?

15: 15, 30, 45, 60, 75, 90, ...

1 mark
List multiples of both.

18: 18, 36, 54, 72, 90, ...

Lowest common multiple = 90 seconds

1 mark
First common time is 90 s.

4 min = 240 s; multiples: 90, 180 (270 > 240)

Both flash together 2 more times.

1 mark
Two further flashes.

(Total for Question 24 is 3 marks)
