10 A ticket for a seat at a concert costs £8.75

There are 19 rows of seats.
There are 28 seats in each row.

The tickets for 100 of the seats have **not** been sold.

(a) Work out an estimate for the total cost of the tickets that have been sold.

Round: 19 → 20, 28 → 30, £8.75 → £9

1 mark
Round for an estimate.

Estimated seats sold = 20 × 30 − 100

1 mark
Subtract 100 unsold seats.

= 600 − 100 = 500

Estimated cost = 500 × £9 = £4500

1 mark
£4500.

£.....
(3)

(b) Is your answer to part (a) an underestimate or an overestimate?
Give a reason for your answer.

.....Overestimate: rows, seats and ticket price rounded up.....

.....

1 mark
Rounded values increase the total.
