18 A shop has two offers.

Without a Store card	**With a Store card**
$\frac{1}{3}$ off normal prices	45% off normal prices

Laura is going to buy a coat in the shop.

The normal price of the coat is £90

Laura would pay less with a Store card than she would pay without a Store card.

How much less?

Without card: one third off 90 = £30 off

1 mark
Find a discount.

Price = £90 – £30 = £60

With card: 10% = £9, 5% = £4.50

45% off = 4 × £9 + £4.50 = £40.50

1 mark
Find both reduced prices.

Price = £90 – £40.50 = £49.50

Difference = £60 – £49.50 = £10.50

1 mark
Subtract the two costs.

1 mark
£10.50.
