11 Nadia sells small boxes of chocolates and large boxes of chocolates.

The total number of chocolates in 3 small boxes and 1 large box is 66
The total number of chocolates in 1 small box and 2 large boxes is 72

Work out the number of chocolates in each small box and the number of chocolates in each large box.

Let s = small-box chocolates, l = large-box chocolates.

$3s + l = 66$ (1)

1 mark
Form both equations.

$s + 2l = 72$ (2)

$2 \times (1)$: $6s + 2l = 132$

1 mark
Eliminate l.

Subtract (2): $5s = 60$, so $s = 12$

$3 \times 12 + l = 66$, so $l = 30$

1 mark
Substitute s = 12.

Small box: 12; large box: 30.

1 mark
12 and 30.

small box …….

large box …….

(Total for Question 11 is 4 marks)
