12 Michelle cycles for 3 hours at an average speed of 27 km/h.

(a) How many kilometres does Michelle cycle?

Distance = 27 × 3 = 81 km

1 mark
Speed × time.

1 mark
81 km.

…….. km
(2)

Josh cycles 124 km in 4 hours.

(b) What is his average speed?

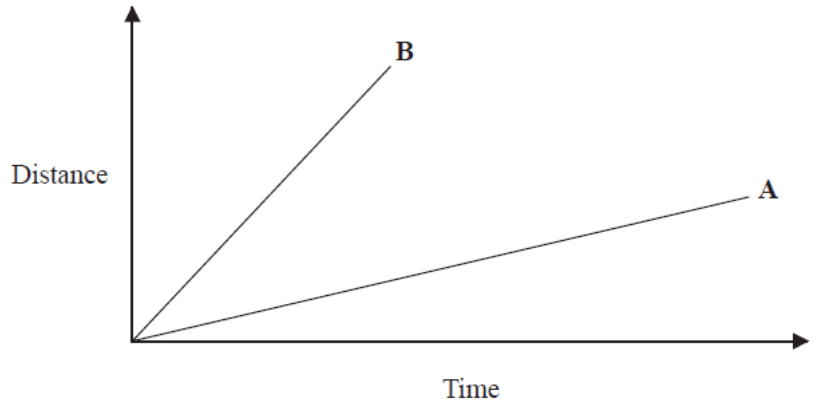

Speed = 124 ÷ 4 = 31 km/h

1 mark
Distance ÷ time.

1 mark
31 km/h.

……..
km/h
(2)

The diagram shows a travel graph for two different cyclists, **A** and **B**.

(c) Which cyclist travelled at the greater average speed?
You must give a reason for your answer.

……Cyclist B: its line is steeper:……...

……...

……...

1 mark
Greater gradient means greater speed.

(1)

(Total for Question 12 is 5 marks)
