12 Expand and simplify $(x + 5)(x - 3)(x + 4)$

$(x + 5)(x - 3) = x^2 + 2x - 15$

1 mark
Expand first pair.

	x^2	$2x$	-15
x	x^3	$2x^2$	$-15x$
4	$4x^2$	$8x$	-60

$x^3 + 2x^2 - 15x$

$+ 4x^2 + 8x - 60$

1 mark
Multiply remaining quadratic and linear.

$= x^3 + 6x^2 - 7x - 60$

1 mark
Collect like terms.
