3 Joe went on holiday to Spain.

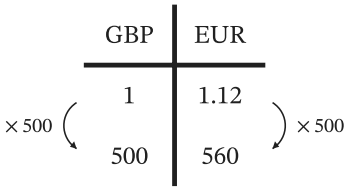

His flights cost a total of £320

Joe stayed in an apartment for 3 weeks.
The apartment cost 560 euros each week.

Joe hired a car for 15 days.
The car hire cost 20.16 euros each day.

The exchange rate was £1 = 1.12 euros.

(a) Work out the total cost, in pounds, of the flights, the apartment and the car hire.

£500 = 560 euros

1 mark
Euros ÷ 1.12.

Apartment: 3 × £500 = £1500

Car: 20.16 ÷ 1.12 = £18 per day

1 mark
Find both total costs.

15 days: 15 × £18 = £270

Total = £320 + £1500 + £270 = £2090

1 mark
Add flights in pounds.

1 mark
£2090.

£.....

(4)

(b) If there had been more than 1.12 euros to £1, how would this affect your answer to part (a)?

.....The total cost in pounds would be less.....

1 mark
Cost decreases

.....Each pound buys more euros.....

.....

(1)

(Total for Question 3 is 5 marks)
