10 There are n adults in a club.
54 of the adults are over 30 years of age.

20 of the adults in the club are chosen at random.
8 of these 20 adults are over 30 years of age.

Work out an estimate for the value of n.

	Old	All	
	8	20	
×6.75			×6.75
	54	135	

54 ÷ 8 = 6.75

1 mark
Scale sample to club.

Estimated total = 20 × 6.75 = 135

1 mark
n = 135.

.....

(Total for Question 10 is 2 marks)
