24 The mass of $\frac{1}{2}$ pint of milk is 303 g.

1 pint is 0.568 litres
1000 cm^3 = 1 litre

Work out the density of the milk.
Give your answer in g/cm^3

½ pint = 0.5 × 0.568 = 0.284 litres

1 mark
Convert pints to litres.

Volume = 0.284 × 1000 = 284 cm^3

Density = mass ÷ volume

1 mark
Convert volume;
divide mass by volume.

= 303 ÷ 284 = 1.066901408...

= 1.07 g/cm^3 (3 significant figures)

1 mark
1.07 g/cm^3.

..... g/cm^3

(Total for Question 24 is 3 marks)
