15 Here is a cube.

Here is a cuboid.

Show that exactly 12 of the cubes can fit inside the cuboid.

Along 8 cm: $8 \div 2 = 4$ cubes

1 mark
Match the dimensions.

Across 2 cm: $2 \div 2 = 1$ cube

Up 6 cm: $6 \div 2 = 3$ cubes

$4 \times 1 \times 3 = 12$ cubes, with no gaps.

1 mark
12 from exact packing.

Check: cuboid volume $8 \times 2 \times 6 = 96$ cm^3;

cube volume $2^3 = 8$ cm^3; $96 \div 8 = 12$.

(Total for Question 15 is 2 marks)
