26 It takes $4\frac{3}{4}$ hours to print some letters when 7 printers are used.

Work out the time taken to print the letters when 3 printers are used.
Give your answer in hours and minutes.

Same workload: printer-hours stays constant.

7 × 4.75 = 33.25 printer-hours

For 3 printers: 33.25 ÷ 3 = 11.083333... hours

0.083333... × 60 = 5 minutes

Time = 11 hours 5 minutes

1 mark
Time is inversely proportional to printer count.

1 mark
Convert only fractional hours.

1 mark
11 h 5 min.

..... hours ..... minutes

(Total for Question 26 is 3 marks)
