DO NOT WRITE IN THIS AREA

27 (a) Expand and simplify $(x + 2)(x - 5)$

$x^2 - 5x + 2x - 10$

$= x^2 - 3x - 10$

1 mark
Multiply all four pairs.

1 mark
Collect like terms.

(2)

(b) Simplify $(y^{-2})^3$

y^{-6}

1 mark
Multiply powers: −2 × 3.

(1)

(c) Simplify $\dfrac{36g^9h}{9g^4h^3}$

$36 \div 9 = 4;\ 9 - 4 = 5;\ 1 - 3 = -2$

$4g^5h^{-2}$

2 marks total
Divide coefficient; subtract powers.

(2)

(Total for Question 27 is 5 marks)
