11 *PQR* and *PST* are two triangles.

Are triangle *PQR* and triangle *PST* similar?
Justify your answer.

PQ = 12 + 6 = 18 cm; PR = 15 + 7.5 = 22.5 cm

PQ ÷ PS = 18 ÷ 12 = 1.5

PR ÷ PT = 22.5 ÷ 15 = 1.5

1 mark
Compare corresponding sides.

The included angle at P is common to both triangles.

Yes: two side ratios match and the included angles are equal, so the triangles are similar (SAS).

1 mark
Equal included angle and both ratios.

(Total for Question 11 is 2 marks)
