13 The graph shows information about the costs of taxi journeys in France.

For each journey, there is a fixed charge plus a charge for the distance travelled.

(a) How much is the fixed charge?

At 0 km, the cost is 4 euros.

4 euros

1 mark
Read the vertical-axis intercept.

(1)

Jean makes two journeys by taxi.
One journey is 6 km more than the other journey.

(b) Work out the difference between the costs of these two journeys.

2 km costs €7; 8 km costs €16.

Difference = 16 − 7 = €9.

9 euros

2 marks total
Distances differ by 6 km; subtract their costs.

(2)

(Total for Question 13 is 3 marks)
