**24** Darren walks at a speed of 5.7 kilometres per hour.

(a) Work out an estimate for the distance, in metres, that Darren walks in 19 minutes.

5.7 km/h ≈ 6 km/h; 19 min ≈ 20 min

20 min = 1/3 hour

Distance ≈ 6 ÷ 3 = 2 km = 2000 m

**1 mark**
Round speed and time to 1 s.f.

**2 marks total**
Distance = speed × time in hours; then ×1000.

2000 metres

**(3)**

(b) Is your answer to part (a) an underestimate or an overestimate?
Give a reason for your answer.

Overestimate: speed and time are both rounded up.

**1 mark**
Increasing both positive factors increases their product.

**(1)**

**(Total for Question 24 is 4 marks)**
