29 Here is a trapezium with exactly one line of symmetry.

Calculate the perimeter of the trapezium.

Drop perpendiculars from the two top corners.

Each outside right triangle has height 15 cm

and hypotenuse 17 cm.

Horizontal offset^2 = $17^2 - 15^2$ = 64

Horizontal offset = $\sqrt{64}$ = 8 cm

Bottom base = 22.6 + 8 + 8 = 38.6 cm

Perimeter = 22.6 + 38.6 + 17 + 17 = 95.2 cm

1 mark
Pythagoras:
$17^2 - 15^2$.

1 mark
Take the positive square root.

2 marks total
Symmetry gives equal offsets and sloping sides.
Add the four OUTSIDE sides only.

95.2 cm

(Total for Question 29 is 4 marks)
